

VT-TRAKKER

THE ULTIMATE FRONT- AND BACKEND SOLUTION FOR YOUR DAW

Introducing the VT-Trakker, vintagetools brings a new product to market, that persuades with uncompromising audio quality, practical monitoring capabilities and perfect integration into any modern, digital studio environment.

Are you looking for...

a device that combines the main controls and the superb quality of those prohibitive, far too big, vintage analog mixing boards in a single, small chassis? A device that does not sacrifice the audio quality, works seamlessly with your DAW environment and is still small enough to be put on any desktop? Well, you might have waited for the VT-Trakker then.

The VT-Trakker brings you the audio-quality of a 500.000,00 € large format analog console with practical, comfortable monitoring capabilities and an integrated state-of-the-art mastering chain for the final mix. By adding a **Sonic Summarizer (Pro)**, which incidentally is perfectly integrated, to your setup, the audio-signals being processed in the daw during mixdown enjoy the advantage of lossless analog summing. That gives you the powerful, silky sound, that often lacks in digital productions.

Features

front-end for recording:

- 2 to 16 mic preamps (ANT, Neumann, Lawo, etc.)
- 2x 3-band vintage analog eq with hp- / lp-filter*
- 2x Neumann U473a (or BFE, NTP) compressor/limiter*
- NTP or RTW plasma- and correlation meters*

back-end for monitoring:

- 2x 3-band vintage analog eq with hp- / lp-filter*
- 2x Neumann U473a (or BFE, NTP) compressor/limiter*
- NTP or RTW plasma- and correlation meters*
- 1x stereo or 2x mono headphone mix with level control, external to cue and Neumann LED-meter
- 3-way speaker-selection and producer headphones control
- Talkback-mic, tb-level and tb-switch
- Neumann or Monitora mastermodul with ultra-precise level control, balance, dim, l/r mute, mono and l/r changeover

*selectable either for the mastering-bus or channel 1/2.
